EDUCATION

2025
ASERRI TECHNICAL
PROFESSIONAL COLLEGE

- Software Development Technician

2020
ASERRÍ HIGH SCHOOL

- High School Diploma

COURSES

- Linux Unhatched – 2025
- Introduction to Data Science – 2024
- Introduction to the Internet of Things – 2024
- Programming Essentials in Python – 2023
- IT Essentials – 2023
- Advanced English (C1) – 2022

TECHNOLOGIES

- Python, C#, SQL
- JavaScript, HTML, CSS
- Linux
- AI in local environments
- Git and GitHub

SKILLS

- Teamwork
- Effective communication
- Problem-solving
- Logical thinking
- Adaptability
- Fast learning
- Time management

MICHAEL BARILLAS

JUNIOR FULL STACK DEVELOPER

PROFILE

Software developer specialized in Python and .NET (C#), focused on process automation and data processing.

I have developed scripts for analyzing and extracting information from structured and unstructured documents, applying parsing techniques and text processing.

Basic experience in web development, SQL databases, and Linux server administration, including script execution, file management, and working environments.

Interested in learning about and working on all aspects of software development.

EXPERIENCE

- XperttaLegal** OCT 2025 - DIC 2025
Professional Software Development Internship
 - Development of Python scripts for automating the processing of legal documents.
 - Extraction and structuring of data from public documents using text analysis (parsing).
 - Development of internal tools to optimize workflows and reduce manual tasks.
 - Use of AI models for automated filtering of relevant information in legal documents.

PROJECTS

- Judicial Data Extraction System**
 - Complete Python pipeline for processing and extracting structured data from unstructured legal documents.
 - Advanced use of regular expressions (regex) and text segmentation logic to identify case files, names, and key dates.
 - Legal document analysis using AI for the extraction and transformation of relevant data.
- Linux Server Configuration and Automation**
 - Linux server configuration and administration: SSH, firewall (UFW), and service management with systemd (start, stop, restart).
 - MySQL database administration on a server: user creation, backups, queries, and maintenance.
 - Local AI model deployment connected to Python scripts to automate data processing.
- Local Grocery Store Management System**
 - Complete desktop application developed in .NET with C# for inventory, sales, and customer management for a local business in Mexico.
 - Integrated SQLite database for local storage without external dependencies, ideal for the client's environment.
 - Includes a sales reporting module, stock control with alerts, and daily transaction records.
